COMOBICS .. OSEGOI

The components such as control section (microcomputer) (not shown), a display (liquid crystal display) (14), and RF communication ϕ ection (not shown) of which the function blocks are mounted on the hard substrate (27) are arranged and accommodated w_{\perp}^{\dagger} thin the upper case (11), and the key operation section (18)/of which the function blocks are mounted on the key board (flexible board (28)), and a battery (29) are arranged and accommodated in the lower case (12). Consequently, an antenna /(13) is disposed on the upper case (11) having the RF communation section (not shown), and the key operation section (1/8) and the battery (29) are arranged and accommodated within the lower case (12), so that a slim profile as well as lightweight and downsizing are realized by bringing the function/blocks to be arranged and accommodated in the upper case and the lower case closer by function in contrast to the example of th/e related art.
